Place-value tasks: optional 1,000 extension PVX

- Part of assessment: A-MATH-001-02; form PVX

- Intended learners: 2nd grade; use only after the thousand grouping and boundary have been taught

- Status: draft

- Scope: ten hundreds as a thousand and counting through 1,000

- Materials: paper, pencil, grouped objects or base-ten drawings, four-place chart; no calculator

Directions may be read aloud. You may use objects, drawings, or spoken answers. Include both endpoints of a count. This extension is separate from the core two-digit and three-digit checks.

Tasks

PVX-01

Regroup ten hundreds into one larger unit. Explain why the exchange keeps the amount unchanged. Write and name the amount, express it as a sum of place values, and show its model. Explain how many digit positions its numeral needs and what each position records.

PVX-02

Count by ones from 996 through 1,000. Show or explain the exchanges when you pass from 999 to 1,000.

The teacher keeps the answer guide separate. Individual work belongs in private records. Omit this extension when it has not been taught.
